

Beginner's Guidance

A short, no-overwhelm roadmap for starting HTML, CSS, Bootstrap & Tailwind — and building strong foundations.

5-Step Roadmap

Do's & Don'ts

By Sara Manzoor

1 Your Learning Roadmap

1

📄 Learn HTML structure first

Tags, semantic elements, forms. Build 3–4 plain static pages before touching any styling.

2

🧩 Master core CSS

Box model, Flexbox, Grid. Recreate a simple real website's layout from scratch — no framework yet.

3

✂️ Pick ONE framework — Bootstrap or Tailwind

Don't learn both at once. Bootstrap is faster for components; Tailwind gives more design control.

4

🔧 Build 2–3 small projects

A landing page, a card layout, a form page. Real practice beats watching more tutorials.

5

📁 Document & share on GitHub

Push your notes and projects. Teaching/sharing what you learned cements it permanently.

2 Do's & Don'ts

✅ Do

- Type out every code example yourself
- Build small projects weekly
- Read error messages slowly and carefully
- Revisit basics when something feels shaky

❌ Don't

- Jump to frameworks before basics feel solid
- Copy-paste code without understanding it
- Compare your day-1 progress to someone's year-3
- Try to memorize every property — look things up

3 How to Actually Practice

🔄 Rebuild, don't just read

Recreate a webpage you like, from a blank file.

⚙️ Break things on purpose

Change a value, see what breaks — that's how memory sticks.

📝 Keep a cheat-notes repo

One markdown file per topic, updated as you learn.

🚦 **Remember:** confusion is part of learning, not a sign you're behind. Every strong engineer rebuilt their basics more than once — consistency beats speed.

SARA MANZOOR'S LEARNING APPROACH

🚀 Learn → 🧠 Understand → ⚙️ Apply → 🔧 Build → 📁 Share
